

ICT-BASED EDUCATION AS A DRIVER OF CHANGE IN LEARNING

Toolkit for creating digital learning materials in schools

STAGE 1 Preparation

Focus on process

It would be good to introduce and implement the development plan as a collective and collaborative process, in which students, teachers and the school head actively participate.

Discuss with your team the following principle:

- You work together to create a shared vision. It may emerge during the development process. It cannot be established at the beginning.
- There is no right or correct path to knowledge. Some problems, improvements, or changes will only be discovered in the context of practice.
- Design and development is a process where there will be false starts and where redesigns, revisions, changes, refinements, and additions are part of the process. It is the process that determines the quality of the end product.
