

# ICT-BASED EDUCATION AS A DRIVER OF CHANGE IN LEARNING

Toolkit for creating digital learning materials in schools

## STAGE 2 Development

### Explore, compare and rate

- *What can different digital learning materials and resources offer in terms of pedagogical approach, concept for pedagogical interaction, structure, design, technological solutions, content, student assessment and evaluation?*
- *Would any of the existing materials or resources be utilised in your own digital learning material production process? Why?*

Explore and compare existing digital learning materials and resources and rate their fitness and potential for your purposes.

- Search the available digital materials on the theme of your development project.
- Analyse and assess identified materials against the integrated process-product assessment framework for systematic quality assurance\_ the Six Ps:
  - Purposeful
  - Practical
  - Participative
  - Polyfunctional
  - Polycultural
  - Positive
- Based on your analysis, choose 1-3 best examples of materials, which you think might be useful for your own digital material production process.
- Present the examples to your project team.
- Decide which materials you will utilise in your future production process.

Pay special attention to what kind of studying and learning context and activity they provide to learners.
